

## Press release

FÜRSTENFELDBRUCK, February 2015

### Güntner Group highlights at ISH 2015 in Frankfurt

The ISH as the world's leading trade fair offers the most comprehensive overview of all the current trends in the building, energy and air conditioning sector as well as in the sector of renewable energies.

We, the Güntner Group, will also be present as a powerful team with our JAEGGI, thermowave and Güntner brands from 10 – 14 March 2015. With the help of efficient products optimised for each application, we will introduce the entire range of technologies our product portfolio offers for dry cooling and air conditioning – from plate heat exchangers and air-cooled dry coolers to adiabatic hybrid units. You will find us in **Hall 10.2, stand C81**.

#### Güntner: GFD with HydroSpray

These modular units offer an unbeatable variety of types. This is why the GFD dry coolers can be designed for each application and can additionally be equipped with the innovative HydroSpray spraying system on request. The corresponding GHM spray control is already integrated into the system; its Professional version has what is known as SectionCycling which is a demand-controlled and section-wise spraying of the unit. The nozzle for each fan section is controlled individually by the system.

#### Multi-section machine from thermowave

From the plate heat exchanger portfolio from our thermowave brand, we will present a multi-section machine with sections for desuperheating, condensation and heat recovery. The sections desuperheating/condensation and heat recovery are operated with separate water circuits to provide maximum operational reliability and an efficient utilisation of the produced waste heat.

#### JAEGGI: Hybrid unit with HydroPad

The high-capacity hybrid dry coolers with *HydroPad* from JAEGGI are another highlight at the stand of the Güntner Group. These units named *Hybrid Blue* are a more sophisticated type of dry cooler. At high external temperatures, the ambient air can be additionally pre-cooled to ensure low coolant outlet temperatures. This adiabatic pre-cooling is achieved using humidification pads named *HydroPads* which are attached at a certain angle in front of the heat exchanger.

#### About Güntner Group Europe

Güntner Group Europe GmbH has its headquarters in Fürstfeldbruck, Germany, and is the cross-brand holding company for Güntner GmbH & Co. KG, thermowave Gesellschaft für Wärmetechnik mbH, JAEGGI Hybridtechnologie AG, and basetec products + solutions GmbH for the EMEA region (Europe/Middle East/Africa). The transfer of information and knowledge across all companies and the resulting synergies provide critical development drivers not only for the Group but also for the market. Güntner Group's high quality levels are based on decades of industry experience and the consistent use of the latest technologies and research. Users include the international automotive, foodstuffs, pharmaceutical and computer industries and numerous public sector institutions.

A-HEAT AG, Allied Heat Exchange Technology AG, with headquarters in Vienna, is a leading international technology group specialising in refrigeration, air conditioning and process technology. The Group functions as a holding company for Güntner Group companies in the EMEA (Europe/Middle East/Africa), NLA (North & Latin America), and APO (Asia & Pacific Ocean) regions.
