

Güntner refrigeration app: Expertise at a click

Güntner's know-how in the field of refrigeration technology and the tools it has developed have proven invaluable over the years. In order to make its knowledge and tools accessible to customers on the move, Güntner has developed a refrigeration app offering practical functions in clear categories.

**Fürstenfeldbruck,
October 2013**

In addition to company news updated on an ongoing basis, customers benefit from unique functions such as material recommendations for specific applications or the popular Refrigerant Slide. The Güntner refrigeration app will be available free of charge in the Apple, Android and Blackberry app stores from the end of October!

Unique material recommendations

After carrying out numerous tests and laboratory analyses, Güntner has published recommendations regarding material combinations for components depending on the planned application. This unique information overview that has been in great demand for many years has also been integrated into the app. As a result, customers can check the environmental conditions for a suitable device design at any time.

Refrigerant Slide

The app's "Slide" function shows the correlation between pressure and temperature for more than a dozen of the most commonly used refrigerants. These include refrigerants that are relevant today such as 245fa. Users enter a specific temperature as required and the Refrigerant Slide shows the corresponding overpressure in bar. Naturally, the specific ODP (Ozone Depletion Potential) and GWP (Global Warming Potential) values are also given.

"Converter" for simple conversions

Thanks to the Converter, anyone can convert exactly the units they need. A total of 18 refrigeration variables such as pressure, temperature, volume, mass flow etc. can be converted into all common international units and then displayed. As a result, users can always find a common basis for measurements – regardless of where in the world a construction site happens to be.

"Service Documents" – a complete collection of documents

The "Service Documents" function ensures that the documents for all Güntner business divisions and devices are available at all times. Documents are first sorted regionally. This is done automatically depending on the basic mobile phone or location settings. Users can then select the required documents which are ordered according to languages and devices. From brochures to operating instructions, information is only a click away. This is particularly useful for service technicians etc. who may want to take a quick look at a device's operating instructions when on the move.

Contact information immediately available

The "Contacts" function provides an overview of all Güntner field service contact persons. All contact details are active. This means that users can plan their route from their current location on the basis of the address, call/e-mail a contact directly, share the information with others or add the details to their own list of contacts. The contact information also includes details for the Service and Spare Parts departments. As a result, it is always possible to find the right contact person.

Always up to date with "News"

With the "News" function, users are always up to date with all Güntner news. As soon as information is published on the Güntner website, it will be available via smartphone too. Depending on the basic smartphone settings, the latest news from the relevant region, e.g. Europe, Asia or America will always be shown.

Communication in both directions

Naturally, Güntner is not only keen to provide information – we look forward to receiving direct feedback too. There is therefore a feedback function which allows users to contact the app contact person with questions or suggestions as to further or improved functions.
